

CROP DATA SHEET · LEAFY VEGETABLE · BRASSICA

Kale

A much bigger season-long cut, from healthier plants.

+111% SEASON HARVEST WEIGHT
CUMULATIVE ACROSS THE HARVEST WINDOW

+111%

SEASON HARVEST

Cumulative harvest weight across the season.

30-50%

LESS NITROGEN

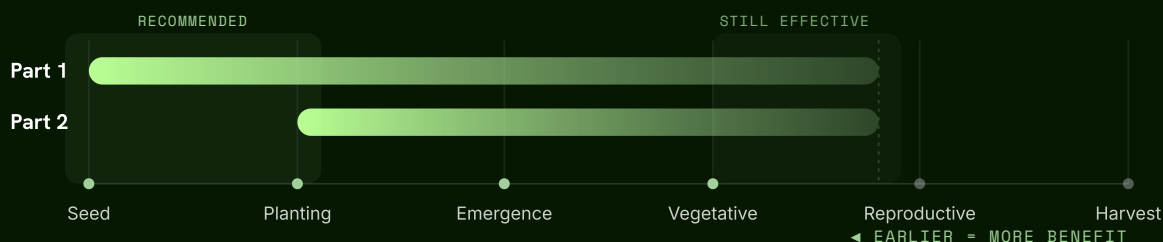

Matched yield at reduced N (Harman 2011).

Improved

VIGOR & QUALITY

Darker, more robust leaves.

WHEN TO APPLY

Apply by **seed treatment**, **in-furrow** at planting, or as a **foliar pass**. Earlier is better, but a foliar pass well into the **vegetative stage** still delivers a real benefit — it is never too late to start.

HOW THE PROGRAM WORKS

Holds up under stress

Living inputs help the plant manage heat, drought and salinity, so more of the season goes into the crop.

More growth

Symbiotic signalling lifts growth rate and nutrient-use efficiency across the canopy.

Healthier root zone

A richer root environment frees up soil nutrients, so the crop leans less on synthetic NPK.

FIELD-TRIAL EVIDENCE

Kale is part of the verified trial record. Figures are from independent replicated trials with cooperator identities withheld, shown as ranges, never a guarantee for a given field.

YEAR	REGION	APPLICATION	RESULT
Field	Replicated	Two-step program	+111% season harvest weight

Independent contract-research trials; cooperator names withheld. Figures are verified ranges, never a guarantee for a given field.
